

## Instructional/Task Analysis

**Related Information: What the Student Should Know**

**Application: What the Student Should Be Able to Do**

### Unit 1: Psychrometrics for Residential HVAC

- |  |   |
|--|---|
| 1. Terms and definitions   | 11. Determine relative humidity when only dry-bulb and wet-bulb temperatures are known  |
| 2. Basic information found on a psychrometric chart                              | 12. Determine dew point when only dry-bulb and wet-bulb temperatures are known  |
| 3. The location of dry-bulb temperature readings                                 | 13. Determine how outside air should be conditioned to provide a comfortable humidity and temperature combination in winter heating |
| 4. The location of wet-bulb temperature readings                                 | 14. Determine how outside air should be conditioned to provide a comfortable humidity and temperature combination in summer cooling |
| 5. The location of dew point temperature readings                                | 15. Determine the relative humidity of a conditioned space  |
| 6. The location of relative humidity readings                                    | 16. Determine the relative humidity of an outdoor space   |
| 7. Three basic cumulative psychrometric processes                                | 17. Determine the wet-bulb temperature of the air inside a duct   |
| 8. Typical air-conditioning processes that can be shown on a psychrometric chart |   |
| 9. Sling psychrometers   |   |
| 10. Operating a sling psychrometer   |   |

### Unit 2: Residential Load Calculation

- |   |   |
|---|---|
| 1. Terms and definitions  | 8. Calculate heat loss and heat gain for a residence using “entire house” for a quick calculation |
| 2. The value of standardized load calculations                  | 9. Determine shaded and unshaded glass area for use in heat gain calculations                     |
| 3. Factors in determining heat loss and heat gain               | 10. Calculate heat loss for a residence, room by room   |
| 4. Steps in calculating heat transfer multipliers               | 11. Calculate heat gain for a residence, room by room   |
| 5. Factors to consider when sizing heating equipment            |   |
| 6. Factors to consider when sizing cooling equipment            |   |
| 7. Ways structural modifications can affect equipment selection |   |

## Related Information: What the Student Should Know

## Application: What the Student Should Be Able to Do

### Unit 3: Residential Duct Design and Sizing

- |  |   |
|--|---|
| 1. Terms and definitions   | 14. Solve problems using the friction loss per 100 feet chart           |
| 2. Types of supply duct systems  | 15. Solve problems using the friction chart for flex duct               |
| 3. Factors affecting system design and the effects they have on the system | 16. Design an air distribution system from a drawing                    |
| 4. Major steps in air system design and their procedures                   | 17. Determine the pressure drop across an evaporator coil               |
| 5. Factors affecting return air duct design                                | 18. Determining the CFM being delivered by a selected forced air system |
| 6. Location of registers and grilles                                       |   |
| 7. Advantages and disadvantages for locations of registers and grilles     |   |
| 8. Climatic zone conditions  |   |
| 9. Control devices and their applications                                  |   |
| 10. Factors to consider in the distribution of conditioned air             |   |
| 11. Grille design factors and their meanings                               |   |
| 12. Outlet replacement and recommended velocities                          |   |
| 13. Air duct calculators   |   |

### Unit 4: Residential Air Treatment

- |   |  |
|---|--|
| 1. Terms and definitions  | 11. Install a humidifier with low voltage controls |
| 2. Air contaminants that affect humans                          | 12. Install an electronic air cleaner              |
| 3. The advantages of maintaining proper humidity in a residence |  |
| 4. Factors which affect humidity in a residence                 |  |
| 5. Common types of residential filtering equipment              |  |
| 6. Operation of an electronic air cleaner                       |  |
| 7. Operation of a dehumidifier                                  |  |
| 8. Operation of a typical humidifier with a forced air furnace  |  |
| 9. Air-to-air exchangers  |  |
| 10. Radon monitoring  |  |

### Related Information: What the Student Should Know

### Application: What the Student Should Be Able to Do

#### Unit 5: Psychrometrics for Light Commercial HVAC

1. Terms and definitions
2. Using a psychrometric chart for light commercial applications
3. Specific humidity
4. Enthalpy
5. Specific volume
6. The load triangle
7. Determine relative humidity when dry bulb and wet bulb temperatures are known.
8. Determine dew point and enthalpy when dry bulb and wet bulb temperatures are known
9. Determine the condition of air presented to the evaporator coil when outside air for ventilation is mixed with room return air
10. Plot a load triangle on a psychrometric chart when return and supply air dry bulb/wet bulb temperatures are known
11. Calculate a load triangle for a given light commercial installation

#### Unit 6: Light Commercial Load Calculations

1. Terms and definitions
2. *Manual N* and light commercial load calculations
3. Load components for heat loss and heat gain in a light commercial space
4. Other sources of light commercial heat gain
5. The winter humidification load
6. Time of day corrections
7. Selecting equipment for a normal cooling application
8. U values
9. Calculate the heat gain for an office
10. Calculate the heat loss for an office

#### Unit 7: Light Commercial System Design

1. Terms and definitions
2. Structural and space considerations in system design
3. Equipment location in system design
4. Control requirements in system design
5. Electrical considerations in system design
6. How ceiling design affects system design

# Instructional/Task Analysis

---

**Related Information: What the Student Should Know**

**Application: What the Student Should Be Able to Do**

## **Unit 7: Light Commercial System Design (continued)**

7. Air distribution and system design
8. Noise and system design
9. Odor control and system design
10. Fire codes and system design
11. Filters and system design
12. Humidification and system design
13. Duct materials and system design
14. The methods of sizing duct
15. Twinning furnaces
16. Balancing an air distribution system

## **Unit 8: Light Commercial Air Treatment**

- |   |  |
|---|--|
| 1. Terms and definitions  | 11. Determine the number of electronic air cleaners needed for an office |
| 2. Comfort level in a light commercial structure                            |  |
| 3. Air cleaners and existing light commercial structures                    |  |
| 4. Common electronic air cleaning devices for light commercial applications |  |
| 5. Performance factors for air cleaner applications                         |  |
| 6. Basic air patterns for air cleaners                                      |  |
| 7. Capacity sizing  |  |
| 8. Mechanical filters   |  |
| 9. Humidification for light commercial applications                         |  |
| 10. Air-to-air exchanges for light commercial structures                    |  |

## **Unit 9: Standard Gas-Fired Furnaces**

1. Terms and definitions
2. Furnace classifications
3. Gas furnace safety
4. Parts of a combustion triangle

## Instructional/Task Analysis

---

**Related Information: What the Student Should Know**

**Application: What the Student Should Be Able to Do**

### **Unit 9: Standard Gas-Fired Furnaces (continued)**

5. Types of gas furnaces and their applications
6. Major components of a standing pilot furnace
7. Automatic ignition systems and their operations
8. Components of a gas burner assembly
9. Types of gas valves and their characteristics
10. Components of a combination electric gas valve
11. Characteristics of heat exchangers
12. Characteristics of draft diverters
13. Types of blower assemblies
14. Components of a control system
15. The functions of a transformer
16. Types of thermostats and their functions
17. Limit switch operation
18. Fan switch operation
19. Combination fan-limit switch operation
20. Pilot light operation
21. Thermocouple operation
22. Pilot safety operation
23. Potential sources for thermocouple failure
24. Potential sources of fan switch failure
25. Potential sources of transformer failure
26. Potential sources of high limit switch failure
27. Potential sources of gas valve failure
28. Potential sources of fan relay failure
29. Potential blower section failures and component sources
30. Potential sources of heat exchanger failure
31. Potential sources of pilot safety failure

## Related Information: What the Student Should Know

## Application: What the Student Should Be Able to Do

### Unit 9: Standard Gas-Fired Furnaces (continued)

- |   |   |
|---|---|
| 32. Factors needed to determine gas pipe sizing           | 38. Trace the high and low voltage circuits of a gas furnace                    |
| 33. Energy conservation devices designed for retrofitting | 39. Construct wiring diagrams for gas furnaces                                  |
| 34. Set back thermostats                                  | 40. Size a gas piping system  |
| 35. Intermittent ignition systems                         | 41. Install a gas furnace   |
| 36. Vent dampers and their uses                           | 42. Start and adjust a gas furnace  |
| 37. Combustion air for a gas furnace                      | 43. Disassemble, inspect, and reassemble an upflow gas furnace                  |
|   | 44. Perform maintenance on a gas furnace  |
|   | 45. Troubleshoot a gas furnace on a "no heat" complaint                         |
|   | 46. Install a retrofit package to replace a standing pilot with a cycling pilot |

### Unit 10: High-Efficiency Gas-Fired Furnaces

- |   |   |
|---|---|
| 1. Terms and definitions                              | 7. Trace the high voltage circuitry for an induced draft furnace  |
| 2. Induced draft furnaces                             | 8. Trace the low voltage circuitry for an induced draft furnace   |
| 3. Condensing furnaces                                | 9. Troubleshoot an induced draft furnace on a "no heat" complaint |
| 4. Pulse furnaces                                     | 10. Troubleshoot a condensing furnace on a "no heat" complaint    |
| 5. Safety with high-efficiency furnaces               |   |
| 6. Maintaining and servicing high-efficiency furnaces |   |

### Unit 11: Oil-Fired Furnaces

1. Terms and definitions
2. Oil furnace types and their performance characteristics
3. Oil storage tanks
4. Major components of an oil burner assembly
5. Operation of a gun type atomizing burner
6. Flame retention
7. Visual flame detection and cad cell location

## Instructional/Task Analysis

---

### Related Information: What the Student Should Know

### Application: What the Student Should Be Able to Do

#### Unit 11: Oil-Fired Furnaces (continued)

- |  |  |
|--|--|
| 8. Troubleshooting cad cell systems            | 18. Install an oil-fired furnace   |
| 9. Combustion chambers                         | 19. Perform a stack temperature test of an oil-fired furnace                                       |
| 10. Fuel pumps                                 | 20. Perform a CO <sub>2</sub> test and determine the combustion efficiency of an oil-fired furnace |
| 11. Nozzles                                    | 21. Perform a smoke test on an oil-fired furnace   |
| 12. Nozzle service guide                       | 22. Perform an "overfire draft" and a "flue draft" test on an oil-fired furnace                    |
| 13. Venting                                    | 23. Perform fuel pump service on an oil-fired furnace  |
| 14. Normal operating sequence                  |  |
| 15. Electrodes                                 |  |
| 16. Combustion testing                         |  |
| 17. Burner components and required maintenance |  |

#### Unit 12: Electrical Heating Systems

- |   |  |
|---|--|
| 1. Terms and definitions  | 14. Install, start, and check an electrical heating unit |
| 2. Types of electrical heating systems                                | 15. Disassemble, inspect, and reassemble an electric fan |
| 3. Duct heaters and electric heaters                                  | 16. Troubleshoot an electric furnace                     |
| 4. Components of electric heating equipment                           | 17. Perform maintenance on an electric furnace           |
| 5. Causes of common failures of electric heating equipment components |  |
| 6. Staging methods and their operations                               |  |
| 7. Installing duct heaters  |  |
| 8. Installing heaters smaller or larger than ductwork                 |  |
| 9. Installing slip-in heaters   |  |
| 10. Installing flange-type heaters                                    |  |
| 11. General recommendations for installing duct heaters               |  |
| 12. Gathering information for system sizing                           |  |
| 13. Formulas for sizing electrical heating systems                    |  |

### Related Information: What the Student Should Know

### Application: What the Student Should Be Able to Do

#### Unit 13: Cooling Systems

- |   |  |
|---|--|
| 1. Terms and definitions  | 19. Trace the cooling circuit on a single phase package heat/cool unit.                        |
| 2. Basic mechanical components of a cooling system                            | 20. Trace the cooling circuit on a 7 <sup>1</sup> / <sub>2</sub> ton three phase rooftop unit. |
| 3. Additional components found on some residential and light commercial units | 21. Troubleshoot an air conditioning condenser section on a "no cooling" complaint             |
| 4. Electrical components and their functions                                  | 22. Use a charging table to check the charge in a capillary cooling system                     |
| 5. Steps in a cooling cycle   | 23. Perform maintenance on an air conditioner  |
| 6. Indoor fan operation   |  |
| 7. Compressor motor failures and ways to detect them                          |  |
| 8. Compressor mechanical failures and ways to detect them                     |  |
| 9. Causes of compressor failures  |  |
| 10. Problems with condensing units and their probable causes                  |  |
| 11. Functions of low side section components in an air conditioner            |  |
| 12. Problems of low side sections and their probable causes                   |  |
| 13. Steps in using a charging table   |  |
| 14. Guidelines for charging a system  |  |
| 15. The scroll compressor   |  |
| 16. Evaporative coolers   |  |
| 17. Evaporative cooling applications  |  |
| 18. Refrigerant recovery and recycling  |  |

#### Unit 14: Heat Pump Systems

1. Terms and definitions
2. Heat pump configurations
3. Components of a heat pump
4. Components of a 4-way reversing valve
5. Operation of a 4-way reversing valve in the heating and cooling modes
6. Metering devices and check valves
7. A heat pump in the defrost mode

## Instructional/Task Analysis

### Related Information: What the Student Should Know

### Application: What the Student Should Be Able to Do

#### Unit 14: Heat Pump Systems (continued)

- |  |   |
|--|---|
| 8. Methods of defrost initiation and termination       | 20. Trace operational circuits for a heat pump in the cooling mode  |
| 9. Components of a heat pump indoor section            | 21. Trace operational circuits for first stage heating in a heat pump   |
| 10. Components failures of heat pumps                  | 22. Trace operational circuits for a heat pump in the defrost mode  |
| 11. The heat pump touch test                           | 23. Trace operational circuits for second stage supplemental heat in a heat pump                                      |
| 12. Special precautions for replacing reversing valves | 24. Trace operational circuits for a fossil fuel heat pump system in first stage heat mode below 40°F outdoor ambient |
| 13. Special precautions for driers                     | 26. Wire a control system for a heat pump   |
| 14. General guidelines for supplemental heating strips | 27. Troubleshoot a heat pump indoor section in the cooling mode   |
| 15. Temperature controls                               | 28. Perform maintenance on an indoor section of a heat pump in the cooling mode                                       |
| 16. Fossil fuel/add-on heat pumps                      | 29. Troubleshoot a heat pump on a “no cooling” complaint  |
| 17. Water source heat pumps                            | 30. Troubleshoot a heat pump outdoor section on an “insufficient cooling” complaint                                   |
| 18. Closed loop/ground source heat pumps               | 31. Perform maintenance on the indoor section of a heat pump  |
| 19. Rules for good heat pump operation                 | 32. Troubleshoot supplemental heat on a heat pump   |
|  | 33. Perform maintenance on heat pump supplemental heating   |
|  | 34. Troubleshoot a heat pump on a “no heat” complaint when the compressor will not run                                |
|  | 35. Troubleshoot a heat pump on a “no heat” complaint when the compressor runs but cycles on compressor overload      |
|  | 36. Troubleshoot a heat pump on an “insufficient heat” complaint when the compressor will run                         |
|  | 37. Check operation of an Essex solid state time-temperature defrost mode   |

# Instructional/Task Analysis

---

**Related Information: What the Student Should Know**

**Application: What the Student Should Be Able to Do**

## **Unit 14: Heat Pump Systems (continued)**

38. Check operation of a Ranco E-15 mechanical time-temperature defrost control
39. Check operation of an Essex 149-600 solid state demand defrost control

## **Unit 15: Balance Points**

1. Terms and definitions
2. The COP of a direct electrical heating element and the COP of a heat pump
3. The COP of a heat pump at a given design temperature
4. Balance points and their relation to COP
5. Balance points and typical stages in heating continuity
6. Factors needed to plot balance points
7. A heat pump performance curve from manufacturer's specifications
8. Balance point #1 and design conditions
9. Additional balance points and design conditions
10. The procedure for sizing a heat pump on the cooling load
11. Advantages of controlled heating stages
12. Installation considerations related to heat pump performance
13. Size a heat pump on the cooling load
14. Plot balance points for a heat pump at given design conditions
15. Locate equipment to obtain maximum COP from a heat pump
16. Set outdoor thermostats for proper staging of auxiliary heat

## **Unit 16: Introduction to Hydronics**

1. Terms and definitions
2. Basic types of hydronic systems
3. Classifications of hydronic systems with their water temperature/pressure characteristics
4. Types of common hydronic system designs

## Instructional/Task Analysis

---

### Related Information: What the Student Should Know

### Application: What the Student Should Be Able to Do

#### Unit 16: Introduction to Hydronics (continued)

- |  |   |
|--|---|
| 5. Common hydronic system designs and their advantages and disadvantages | 26. Lay out a series loop single circuit hydronic system with boiler located under floor of dining room |
| 6. Design water temperature  |   |
| 7. Design water temperature drop   | 27. Select boiler and expansion tanks   |
| 8. Design water flow rates through circuits                              | 28. Make a trial selection of pump and select pipe size for series loop system                          |
| 9. Flow rates through terminal units and their tubing sizes              |   |
| 10. Placement of terminal units  |   |
| 11. Terminal units, their characteristics and uses                       |   |
| 12. Steps in the selection and sizing of terminal units                  |   |
| 13. Fuels, ratings, and selection of boilers                             |   |
| 14. Advantages and disadvantages of types of residential expansion tanks |   |
| 15. Steps in selection of residential expansion tanks                    |   |
| 16. Types, design, and sizing of residential pumps                       |   |
| 17. Factors in the selection of residential pumps                        |   |
| 18. Steps in the selection of residential pumps                          |   |
| 19. Factors affecting pipe sizing  |   |
| 20. The procedure for selection of pipe sizes                            |   |
| 21. Types of hydronic specialties and their characteristics and uses     |   |
| 22. Steps in designing a hydronic system                                 |   |
| 23. Integrated systems   |   |
| 24. Pulse combination boilers  |   |
| 25. Wall-mounted boilers   |   |
